THE CHIMNEY BALLOON

- **Stop chimney draughts!**
- **Saves on heating bills**
- **Stops debris, soot and bird mess**
- **Reduces outside noise entering room**
- **5 sizes to fit all chimneys**

The Chimney Balloon is a very simple and effective way of blocking chimneys when not in use. It stops draughts and £££'s of wasted heat going straight up the chimney.

A room with a blocked chimney needs only about half the heat compared to a room with an open chimney, so it makes sense to fit one in every chimney that is not in every day use.

The Chimney Balloon is made in a special laminate of three plastics to make it air tight, tear resistant and long lasting. It also has a special shape that allows ventilation in two corners, to keep you chimney dry. Using a Chimney Balloon is completely safe and if accidentally heated it shrivels and deflates.

Easy to install and remove.

Simply position your chimney balloon just out of sight above the fireplace opening and inflate it using our mouth inflation tube or an air bed pump.

If you have a large inglenook, you can stand inside and inflate the Chimney Balloon above your head. To reach higher, buy a hand grip extension kit.

To remove, simply open the tap on the hand grip, let the Chimney Balloon deflate, then gently remove it from the chimney. Roll up and put it in a polythene bag ready for future use.

Product Code	Description
3709009	9" x 9" Chimney Balloon
3709015	9" x 15" Chimney Balloon (small)
3712012	12" x 12" Chimney Balloon
