K-WRAP

The complete solution for insulating gas and oil class 2 flexible chimney liners. This unique product, manufactured in the UK, uses the most up to date technically designed products with ease of installation in mind. With a thickness of just 6mm, it allows installation within the tightest of stacks.

K-wrap is specifically designed for the thermal insulation of gas and oil class 2 chimney liners.

Manufactured from long-strand textile grade non-combustible borosilicate glass fibre, quilted both sides with reinforced aluminium foil to prevent the product from delaminating and give ease of installation. The inner textile is mechanically consolidated to form a felt capable of withstanding severe thermal shock which is stable in arduous environments and does not accelerate corrosion of metallic components giving longevity to the liner.

The product is available in 8 and 2 metre lengths, which can be cut to suit any height required.

Thermal Properties :

Temperature	10	50	100	150	200	250	300	400
W/mK	.039	.043	.048	.051	.059	.063	.078	.094
