

Premium 4 Heat Powered Stove Fan

FIR361

The Premium 4 fan packs a mighty punch; don't be deceived by its diminutive size, sitting at just 199mm high, our Premium 4 fan operates at a lower temperature and really blows hot air – FACT.

The innovative Premium Fan features a uniquely engineered design that boasts an advanced radiating fin to generate maximum airflow, with up to 70% more air flow than competitor products. Designed to start at a temperature as low as 50°C*, the fan requires no batteries or external power. Heat is conducted through the base of the fan and converted to electricity which powers the fan motor. With a durable, hard wearing black anodised finish, the fan automatically slows and stops as the heat from the stove burns out.

- Compact design: only 199mm high to fit the tightest of spaces
- Ultra low 50°C starting temperature* (under test conditions) – perfect for the latest cooler-topped stoves
- Unrivalled performance – pushing at a huge rate of 420 feet a minute
- Thermally controlled actuator for optimum Peltier performance
- Dynamically balanced fan for unrivalled motor life, balance & output

* Under test conditions. Actual starting temperature varies according to stove, installation and environment.

Specifications:

Height (including blade): ... 199mm
 Width (including blade):..... 180mm
 Base plate width: 110mm
 Base plate depth: 75mm
 Total fan depth (approx.):... 100mm
 Weight:..... 550g
