

# ICID Plus

100-150mm diameter range Twin wall insulated system chimney for gas, oil, wood and multi-fuel

DON'T FORGET TO REGISTER YOUR INSTALLATIONS AND START EARNING SCHIEDEL INSTALLER REWARDS See inside for more details

### Product description

Our ICID range has evolved into a multi-application system adaptable for Dry (D), Fu (W) and even Positive Pressure (P) applications.

At Schiedel, we pride ourselves on our technology and innovation and this heating season introduce our evolutionary 3-in-1 system:

**ICID Plus** Ideal not only for traditional stoves but also for pellet stoves, biomass appliances, mini/micro CHP and even condensing boilers capable of withstanding positive pressure.

The system is designed so that the outer case is load bearing and the inner liner is free to expand independently, therefore thermal expansion is accommodated within each and every joint of the system.

Available in two versions with a choice of either a bright annealed or a matt black painted stainless steel outer case, ICID Plus is available in the following range of diameters: 100 to 150mm.

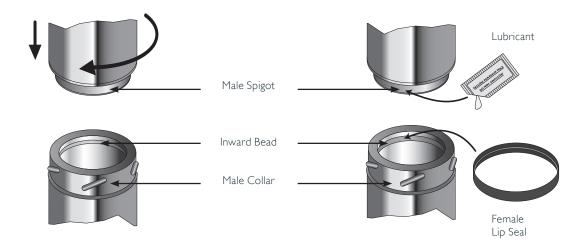

Front cover image courtesy of Charlotte Smith from St. Mary's Space showing an ICID system installed by Backwoodsman.

### **ICID PLUS PRODUCT FEATURES**

- Twist-lock bayonet jointing system. Secured by locking band (supplied as standard with all components with a female collar).
- Advanced corrosion resistant design and construction uses laser welded 316L stainless steel inner liner and stainless steel case.
- The 25mm of high density mineral wool insulation maintains flue gas temperature, maximising efficiency, improving flue draught on start up and minimising condensation.
- Low external case temperature.

- The inner liner is free to expand through the female collar, allowing for maximum thermal expansion even during a soot fire.
- The inner liner has an engineered design with an inward bead at the female end which acts as a capillary break preventing moisture being drawn through the joint.
- Lip seal packs are available containing a quick fit female lip seal with a grease sachet to allow product to be easily adapted for use in Positive Pressure (P) applications for use on condensing positive pressure appliances.

# Joint design

WITHOUT LIP SEAL ICID Plus for N rated Negative Pressure Applications (i.e. Stoves)

WITH LIP SEAL
ICID Plus for P rated Positive Pressure Applications
(i.e. Condensing Boilers)

### Technical data

| Average Thermal Resistance (200°C) | 0.4m <sup>2</sup> k/W                |                           |

### **CORROSION RESISTANCE**

Chimneys are subject to significant corrosion attack by flue gas condensates, particularly from solid fuel. ICID Plus is specifically designed and manufactured to resist this corrosion.

### **CHIMNEY DIAMETER**

The chimney size should be as recommended by the appliance manufacturer. Where there is a requirement for a flue diameter smaller than the appliance spigot, then the operational requirements of the appliance and the configuration of the flue must satisfy the flue sizing requirements of EN13384-1 for single appliances, and EN13384-2 for multi appliances.

### **Approvals**

### **DESIGNATIONS**

ICID is CE Certified to EN1856-1 TÜV 0036 CPR 9195 010 with designations: ICID is CE Certified to EN1856-2 TÜV 0036 CPR 9195 042 with designations:

### SYSTEM CHIMNEY EN1856-1

T450 N1 W V2 L50050 G60 T450 N1 D V3 L50050 G60 60mm Distance to combustibles running through a combustible floor using G60 round firestop.

### **CONNECTING FLUE PIPE EN1856-2**

T450 N1 D V2 L50050 G100 M

### **NOTES**

- Manufactured under a Quality Management Scheme approved to BS EN ISO 9001.
- 4 Hour Fire Rating to BS476 Part 20.
- Certified for corrosion resistance on gas, oil and solid fuel by Gastec, MPA and TÜV.
- HETAS listed for use on solid fuel applications.

### Gasket kits

(for use in P rated positive pressure applications)

| Female viton lip seal kit  |        |        |        |  |
|--|--------|--------|--------|--|
| Int Ømm  | 100    | 125    | 150    |  |
| Ext Ømm  | 150    | 180    | 200    |  |
| SAP Code   | 147322 | 147323 | 147324 |  |
| This female lip seal must be used on wet positive pressure applications and fits into the inward bead on the female socket on the inside of the liner immediately below the male collar. |        |        |        |  |

### **Dimensions**

| The dimensions of the flue are: |     |     |     |
|---------------------------------|-----|-----|-----|
| Int Ømm                         | 100 | 125 | 150 |
| Ext Ømm                         | 150 | 180 | 200 |

### Finish

Paint - ICID Plus can be supplied painted in any RAL colour (additional costs apply).

The standard finish for ICID Plus is satin. The option of a matt finish is available on request.

# Bungalow firestop kits

All Unventilated Bungalow Firestop Kits may only be used on a combustible ceiling in a bungalow where there is a minimum 50mm distance to combustibles where the chimney penetrates the ceiling area and where the roof space above the ceiling is open and ventilated. Within the roof space, a protective wire mesh framework must be built around the chimney to ensure the minimum 50mm distance to combustibles is maintained.

# Ignis Protect

# Designed specifically for air tight, energy efficient and timber framed buildings

In order to meet the latest European building regulations, specific leakage and performance criteria have to be met, which are much more stringent than in the past. These criteria are key in relation to chimney products passing through combustible walls.

Schiedel Chimney Systems have invested heavily to provide tested and approved solutions to resolve these challenges and are proud to introduce their latest cutting edge product.

Protected in accordance with European patent specification EP 1 878 849 B1

### **IGNIS-PROTECT**,

Winner of Best Product Award Hearth & Home Exhibition 2015.

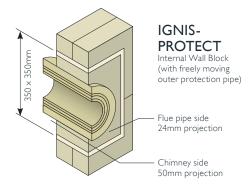

# Product description

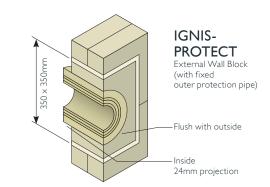

### PRODUCT FEATURES

- Suitable for SW and DW connecting flue pipes passing through interior or exterior walls made of combustible materials
- Available in two versions:
  - For exterior walls (with aluminium laminate on inside face)
- For interior walls (without aluminium laminate and with an extended removable core)
  - Available in both 90° and 45° versions For flue gas temperature up to:

- 450 °C for SW connecting flue pipes (T450)
- 600 °C for DW connecting flue pipes(T600)
  - Max. 100 °C surface temperature during soot fire
- Monolithic component made of mineral wool, density
- 120 kg/m³, building material class A1
  - Internal face finished with aluminium laminate
- External face made with textured surface to facilitate facade rendering
- Removable pipe sections to allow interfit with the residential diameters of ICID

Can be used without any additional protection Available in a range of standard wall thicknesses between 100mm -500mm

# **Approvals**

**DIB**t

Zulassungs Nr. Z-7.4-3372 Deutsches Institut für Batechnik

- Z-7.4-3372 relating to T450 designated products
- Z-7.4-3402 relating to T600 designated products

### IGNIS-PROTECT 45° VERSION

# IGNIS-PROTECT ICID PLUS ON TRADITIONAL TIMBER FRAME WALL

### Protect Box

Engineered to meet the key challenges of modern houses...

Schiedel Protect Box is the proven solution to safeguard distance to combustible materials in low energy and passive houses.

### PRODUCT FEATURES

- Increasing air tight construction
- Standard height of 350mm or 700mm.
- Tested and designed for use with both painted and unpainted ICID throughout
- Designed to meet blower door test.
- Constructed using a high temperature resistant Rockwool insulation to give zero distance to combustibles.
- A silicone sealing kit is available to allow for the chimney to pass through an air tight membrane at ceiling level in a cold roof construction or at roof level in a warm roof construction.
- The seal comes with marked diameter measurements (100-380mm), ensuring an easy cutting process for each diameter.

# Distance to combustibles on high temperature

(T450) applications (see p.17)

### INTERNAL BUNGALOW (VENTILATED LOFT SPACE) Fig. 2

Combustible and Non-Combustible Floors

# System design

### **OUTLET SITING**

Flue terminations for solid fuel & oil are subject to EN15287-1 2007. Figures A and B illustrate recommendations for the most commonly encountered outlet terminations. Flue terminations for gas in domestic situations are governed by the BS5440-1 2008 Section 4.2. Figure C illustrates recommendations for the most common siting situations encountered. Adjacent taller structures may require increased height. The minimum flue projection through the roof is 600mm to the underside of the terminal.

### **LOCATION OF OUTLET**

Fig. A
Outlet siting for Oil
Appliances (<45kW)

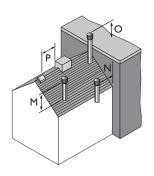

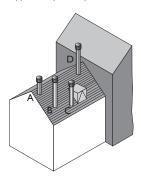

Fig. B
Outlet siting for Solid Fuel
Appliances (<50kW)

### **FLUE ROUTING**

The chimney should remain as straight as possible through its vertical run to assist flow. Should it be necessary to offset a chimney run the following guidelines should be adhered to:

It is recommended that a vertical rise of 600mm should be allowed immediately above the appliance before any change of direction. Within a system, on all fuels, there should be no more than 4 changes of direction of maximum 45°.

90° Factory made bends or tees within the system may be treated as being equal to two 45° bends (see Document J of the Building Regulations issued October 1st 2010).

### **TERMINAL TYPES**

On solid fuel appliances, an open termination is normally recommended. However in certain conditions, rain caps or anti-downdraught terminals may be used.

Rain caps and anti-downdraught terminals are available in two versions, with mesh/spark guard and without mesh. Where a terminal with mesh is used, there is a risk of soot build up, and therefore regular cleaning is required to avoid blockage, particularly when using oil or solid fuel.

### PROVISION FOR SWEEPING, CLEANING AND MAINTENANCE

Provision should be made for inspecting and cleaning the chimney. To aid cleaning, sufficient distance should be left between changes of direction to permit the safe passage of cleaning brushes within the system. This is particularly important on solid fuel applications. It is recommended that chimneys serving solid fuel appliances be swept as frequently as necessary but at least twice a year. Choose an access component suitable for your installation unless cleaning/inspection can be done through the appliance.

### OUTLET SITING FOR OIL APPLIANCES (<45KW)

| Locati | on of outlet  | Pressure jet burner | Vapourising burner |
|--------|---|---------------------|--------------------|
| М      | Above the highest point of an intersection with the roof  | 600mm               | 1000mm             |
| Ν      | From a structure to the side of the terminal  | 750mm               | 2300mm             |
| 0      | Above a vertical structure which is less than 750mm (pressure jet burner) or 2300mm (vapourising burner) horizontally from the side of the terminal | 600mm               | 1000mm             |
| Р      | From a ridge terminal to a vertical structure on the roof   | 1500mm              | Should not be used |

### OUTLET SITING FOR SOLID FUEL APPLIANCES (<50KW)

| Point (Note | where flue passes through weather surface is 1, 2)   | Clearance to flue outlet   |
|-------------|--|--|
| А           | At or within 600mm of the ridge  | At or within 600mm above the ridge   |
| В           | Elsewhere on the roof (whether pitched or flat)  | At least 2300mm horizontally from the nearest point on the weather surface and: a) at least 1000mm above the highest point of intersection of the chimney and the weather surface; or b) at least as high as the ridge |
| С           | Below (on a pitched roof) or within 2300mm horizontally to an openable roof-light, dormer window or other opening (Note 3) | At least 1000mm above the top of the opening   |
| D           | Within 2300mm of an adjoining or adjacent building, whether or not beyond the boundary (Note 3)                            | At least 600mm above any part of the adjacent building within 2300mm   |

# System design

- **1.**The weather surface is the building external surface, such as its roof, tiles or external walls.
- 2.A flat roof has a pitch less than 10°.
- **3.**The clearance for A or B, as appropriate, will also apply.
- **4.**A vertical flue fixed to an outside wall should be treated as equivalent to an inside flue emerging at the nearest edge of the roof.

# Chimney should not penetrate within the shaded area Fig. C BS 5440-1Outlet siting for Gas Appliances (<70kW)

### **ROOM VENTILATION**

The room carrying the appliance should have an air vent either direct to an external air source or vented into a room that has an external vent direct to an air source. This is required to provide adequate air supply to allow the appliance and flue to operate efficiently. These requirements are specified in the Building Regulations (Document J) also by CIBSE and BS5440.

### **COMMERCIAL INSTALLATIONS**

Schiedel Rite-Vent can provide a full design & flue sizing advice service for commercial installations, using both ICID Plus and our ICS product ranges.

### PROVISION FOR CONDENSATE DISPOSAL

(subject to appliance manufacturer recommendations)

Normally solid fuel and atmospheric gas and oil appliances will not need a drain unless rain ingress is significant. Most condensing appliances however need provision for drainage. As a rule of thumb a condensing boiler produces 1 to 1.5 litres of condensate per hour per 10kW of input.

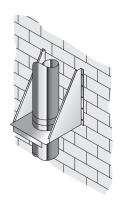

This is a significant amount of acidic liquid which must be drained from the system. Choose appropriate flue drainage components, normally fitted at the base of the stack and close to the appliance outlet.

On high efficiency or on condensing systems, a 3° slope on horizontal runs is advised, using the appropriate 87° bend and 93° tee.

# Load bearing data

| Maximum load bearing (metre          | s of pipe) |     |
|--------------------------------------|------------|-----|
| Internal Diameter (mm)               | 80-130     | 150 |
| Base drain section                   | 22         | 18  |
| Retrofit wall support                | 10         | 10* |
| Drain plug support                   | 18         | 18  |
| Adjustable top plate + locking band  | 15         | 15  |
| Telescopic floor support             | 18         | 18  |
| Pair of side plates (see diagram a)  | 15         | 15  |
| Pair of side plates (see diagram b)  | 10         | 10  |
| Cantilever support                   | 22         | 18  |
| Extension support (anchor plate)     | 1.5        | 1.5 |
| Ventilated support plate (all types) | 12         | 12  |
| Support plate                        | 12         | 12  |

Diagram A

Diagram B

### Installation

These notes should be read in conjunction with the detailed ICID Plus Installation Instructions.

### MANDATORY REQUIREMENTS

Connection to an appliance that is connected to the fuel supply must be carried out by a GAS SAFE (gas) or OFTEC (oil) registered installer. We recommend the use of HETAS approved installers for solid fuel applications. For full design and installation details the key referral documents are:

- BS EN 1856-1: Chimneys System Chimney Products
- BS EN 1859: Metal Chimneys Testing Methods
- BS EN 1443: Chimneys General Requirements
- BS EN 15287-1: Chimneys. Design, installation and commissioning of chimneys. Chimneys for non-room sealed heating appliances.
- BS 5440-1: Flueing and ventilation for gas appliances of rated input not exceeding 70kW net (1st, 2nd and 3rd family gases)
- Specification for installation of gas appliances to chimneys and for maintenance of chimneys.
- Approved Document J: Combustion appliances and fuel storage systems (England & Wales)
- DFP Technical Booklet L: Combustion appliances and fuel storage systems (NI)
- Technical Handbook (Domestic & Non Domestic), Section 3 Environment (Scotland)
- Appliance Installation Instructions and related standards. Other standards covering specific applications will also be relevant and must be adhered to.
- Planning permission may be required, and reference should be made to the local Building Control Department.

### **ENCLOSURE/SHAFTS**

With the exception of the room containing the appliance, where the chimney passes through any part of the building, where there is a risk of accidental human contact, i.e a bedroom etc., or where there is a risk of contact with combustible materials stored in a cupboard or in the roof-space, the chimney must be enclosed in an appropriate way to meet Building Regulations. This can be achieved by boxing in the chimney in habitable rooms, or by the use of a protective wire mesh frame in roof spaces etc. In all cases the minimum distance to any combustible material, including loft insulation, must be respected according to the table on p.3, and any enclosure should be ventilated using the appropriate ventilated fire stops (see p.17).

### **DISTANCE TO COMBUSTIBLES**

In accordance with building regulations its is essential that the correct distance to combustible material is maintained. On solid fuel applications, where there is a risk of soot fire, a distance of 60mm to combustibles must be maintained within a combustible floor and within a combustible shaft, where the old G60 ventilated fire stop plates and G60 ventilated support plate are used (see Fig.1 p.31). Where the new G50 ventilated firestop plates and G50 ventilated support plates are used, then this distance to combustibles is reduced to 50mm both within the floor space and within the shaft. There is no need to line the area within the floor cavity with plasterboard; however the ventilated fire stop plate and ventilated support plate must be used.

On gas and oil applications, a distance of 50mm to combustibles must be maintained within a combustible floor and within a combustible shaft. The ventilated fire stop plate and ventilated support plate must be used.

Where the chimney penetrates a non combustible floor and where a non combustible shaft is used, a distance of 50mm to the shaft is sufficient. In this case, non ventilated fire stops and non ventilated support plates may be used at first floor level with a ventilated fire stop being used where the chimney penetrates into the roof space.

On bungalow applications where the chimney runs through either a combustible or non-combustible ceiling, an unventilated bungalow fire stop plate kit can be used. Please note that an unventilated support plate can not be used above the ceiling in this case. The weight of the chimney should be supported using the roof support (see p.21). Distance to combustibles must be respected within the ceiling space (see Fig. 2 p.30) and mesh frame should be used within the loft space, which must be ventilated (see Fig. 2 p.30).

### Installation

### **JOINTING SYSTEM**

All joints in the ICID Plus chimney range, which require a locking band, are made by means of a simple twist lock jointing method. This is achieved by pushing together the male and female collars on each end of the main chimney components and twisting the components through 1/6 of a turn to lock the collars into place. It should be noted that the female collars on elbows and tees are not fluted in order to allow for these items to be positioned according to requirements on site. In all cases the joints should be held securely in place using the locking band, which is supplied with all components with a female collar.

Where a system is to be used on a positive pressure condensing appliance, then components, which are not designated as dry only, can be converted for this application by the addition of the lip seal or in the case of adjustable pipes, lip seals. Please refer to p.6.

Joints are not permitted within wall and ceiling spaces. Any flue pipe (i.e. single wall) connection to the chimney must be made in the same room as the appliance. The chimney must project at least 425mm below the ceiling. Where a chimney passes through a wall, a wall sleeve must be used to prevent damage to the chimney and the building.

### CONNECTION TO APPLIANCE

Use the appropriate appliance connector, sealing with fire rope and fire cement or high temperature sealant on solid fuel. The length of the inner liner can be trimmed where required to allow for thermal expansion within the appliance outlet spigot.

### APPLIANCE REMOVAL

Use of an adjustable length immediately above the appliance enables removal of the appliance later without dismantling the full system.

### INSPECTION

To conform to Building Regulations, provisions should be made to enable a chimney to be inspected and cleaned. An inspection length or an insulated 90° or 135° Tee can form a suitable inspection point. To aid cleaning, sufficient distance should be left between changes of direction to permit the safe passage of cleaning brushes within the system. This is particularly important on solid fuel applications. It is recommended that chimneys serving solid fuel appliances be swept as frequently as necessary, but at least twice a year.

### **CHIMNEY DIAMETER**

The chimney size should be as recommended by the appliance manufacturer and must satisfy the flue sizing requirements of EN13384-1 for single appliances, and EN13384-2 for multi appliances.

### Guarantee

### LIFE EXPECTANCY AND GUARANTEE

We are confident in our products and so offer you (the owner) a generous guarantee in relation to the ICID Plus system (the System). Provided that you comply with the conditions stated below, the system will be free from defects for whichever is the greater of:

- a period equal to the guarantee period of the appliance to which the Liner is first connected; or
- 20 years.

The conditions of the guarantee are:

- Correctly sized and installed in accordance with the manufacturer's instructions, current Building Regulations and relevant British and European standards.
- Maintained correctly by a qualified and competent person and maintenance records kept updated for both appliance and chimney/chimney liner.
- Used in combination with an appliance burning only approved fuels in accordance with Schiedel Chimney Systems and the appliance manufacturer's instructions.
- Register your product within 30 days of installation at www.schiedel.com/uk and provide us with any evidence we
  reasonably request to prove that your System has been fitted by a HETAS approved installer or if not, has been
  signed off by a Building Control Inspector prior to use.
- Familiarise yourself with the installation instructions and comply with its provisions in full during the lifetime of your usage of the product (including by keeping the required records safe). Failure to do so will invalidate any guarantee claim.

For more details about the guarantee visit our website.

For recommended fuels listings, please refer to the HETAS Guide www.hetas.co.uk

In the event of a fault developing in the product due to defective materials or faulty manufacture Schiedel Chimney Systems undertake to replace the product only. Schiedel Chimney Systems cannot accept liability nor take any responsibility for the installation, building or redecorating costs or any other consequential losses arising. If any complaint is found to be a result of faulty installation, non-compliance with or abuse contrary to these conditions, the cost of site investigation is chargeable.

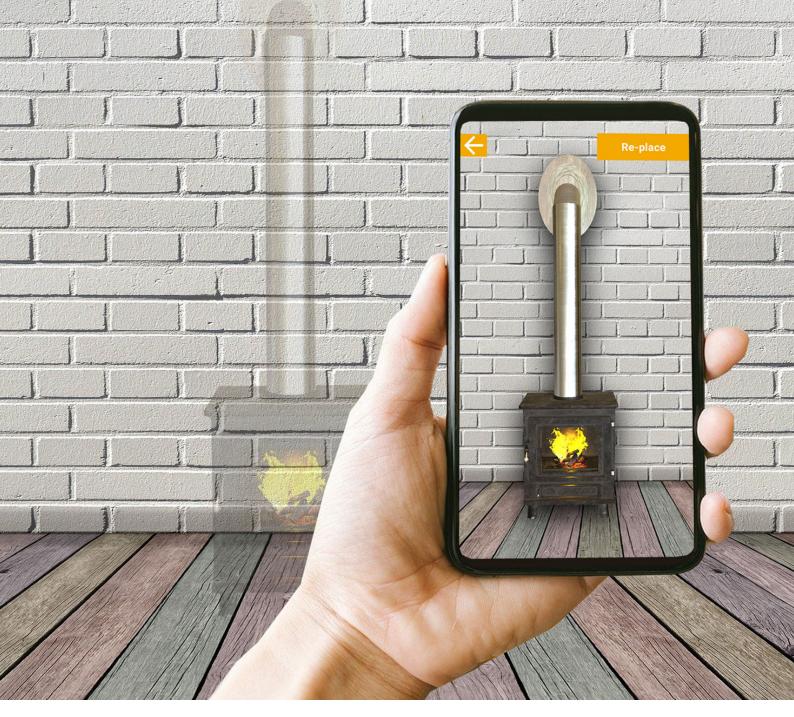

### Schiedel Installer Rewards

Exciting news from Schiedel Chimney Systems for stove and chimney Installers! Whenever you register an installation with our easy to use, online guarantee registration portal, you will now accrue points based on the number of installations and installation type.

Once you have reached a minimum of 25 points, you can begin to redeem them for £25 Love2Shop vouchers.

So head on over to the portal and start to register your installations to take full advantage of our Lifetime Guarantee on ICID, and also to start earning points!

Download the Augmented Reality Chimney Builder, which allows you to see a stove within a room and generate a quote on your mobile device
