TT22 RANGE

Anyone who appreciates heat will love TermaTech's TT22 range. Timeless Danish design combined with high quality and environmentally sound combustion.

Single-handle air control is easily accessible just below the door. In the TT22 range, you determine whether you prefer gradual heat at around 5 kW, or rapid, strong heat at up to 10 kW. The TT22 range includes many different versions, based on the same fantastic combustion chamber. Choose between black and grey, and soapstone cladding.

Design:

Choose between steel or soapstone cladding, with straight or rounded sides. There are tall models, short models and a unique, almost floating version on a pedestal foot. If you at any time wish to give your stove a new look, for many models the cladding can be changed from steel to soapstone, or vice versa. All of the TT22 models share in common that they can be installed and connected to the flue from above and from the rear.

Functions:

It's easy to control the combustion air using an air regulator placed discreetly under the door. You can connect fresh air/air from the outdoors directly to the TT22's combustion. This may be necessary in new or newly renovated homes.

For all models in the range, cast iron is used in the base and inside the door, to ensure its durability and stability. In some models, the stove's top panel is also made of solid cast iron, to give the stove a special rounded and exclusive look.

TT22 RANGE

TT22

The right kind of heat. There is nothing like dancing flames and the comfortable heat from a wood-burning stove.

The TT22 is easy to operate, with a large combustion chamber to ensure that you can build a strong fire, to get heat rapidly, or take it easy and enjoy a smaller fire.

Energy efficiency class	A ⁺
Nominal effect in kW	7,5
Operating range in kW	5 - 10
Efficiency rate %	82
Heats sqm	40 - 160

TT22

TT22S

TT22S

Soapstone cladding on the top and sides.

The soapstone slowly absorbs the heat, and radiates the stored heat long after the flames have died out.

Soapstone is a natural material, so its appearance varies from stove to stove.

Energy efficiency class	A ⁺
Nominal effect in kW	7,5
Operating range in kW	5 - 10
Efficiency rate %	82
Heats sqm	40 - 160

TT22R

The cast-iron top and the rounded sides of the TT22R amplify the front's soft lines – the result is a cohesive and harmonious appearance.

Below the combustion chamber there is space to store firewood, and thanks to the ventilated handle you will not burn yourself when putting firewood on the fire.

Energy efficiency class	A ⁺
Nominal effect in kW	7,5
Operating range in kW	5 - 10
Efficiency rate %	82
Heats sqm	40 - 160

TT22R

TT22RP

Energy efficiency class	A*
Nominal effect in kW	7,5
Operating range in kW	5 - 10
Efficiency rate %	82
Heats sqm	40 - 160

TT22RP

The TT22RP is part of the TT22 range, but is distinguished by its unique cast-iron pedestal. It's wide footprint ensures the stove's stability and also gives the overall design a balanced look. The stove's external sides are rounded, so the light appearance is reinforced by the curved design.

The stove almost appears to hover in the air, due to the pedestal, which also conceals the integrated fresh air inlet.

Together with the pedestal, the broad cast-iron foot helps to ensure the stove's 100% stability, but it can also be adjusted to accommodate uneven floors.

The TT22RP's unique appearance is due to the combination of a large combustion chamber, compact cast-iron design, large panoramic view and elegant lightness.

TT22RPS

TT22RPS

The TT22RP is now also offered with soapstone cladding as the TT22RPS. It is distinguished by its cast iron pedestal, which carries 282 kg of beautiful, natural soapstone. The panoramic view of the stove's flames, combined with the broad foot, ensures stability and also gives the stove a balanced appearance.

Energy efficiency class	A*
Nominal effect in kW	7,5
Operating range in kW	5 - 10
Efficiency rate %	82
Heats sqm	40 - 160

TT22H

The TT22H is built on the same combustion chamber as the range's other models, which assures you of fine and effective combustion. The TT22H and HS are equipped with a door on the firewood compartment, making the stove elegant and practical, since accessories can be hidden behind the door.

Energy efficiency class	A*
Nominal effect in kW	7,5
Operating range in kW	5 - 10
Efficiency rate %	82
Heats sqm	40 - 160

TT22H

TT22HS

TT22HS

The TT22HS offers the best from the world of wood-burning stoves. Some would call it big and heavy, others beautiful and elegant, but there is no denying that it is a fantastic heat source that will look good in any room.

Energy efficiency class	A*
Nominal effect in kW	7,5
Operating range in kW	5 - 10
Efficiency rate %	82
Heats sqm	40 - 160

TT22HST

HST stands for Heat Storage and means that these wood-burning stoves store their heat.

Beneath the top stone there are four large soapstone blocks, which together with the cladding store the heat from the stove. The design is rounded off with soapstone in the firewood compartment.
